Summary

I have actively contributed to modern web projects utilizing ASP.NET Core, Web API, RESTful API, EF Core, and Angular technologies. With strong analytical skills and a proactive approach to development, I am eager to take on responsibilities. As a collaborative team player, I am also a quick learner who prioritizes code and software quality. In addition to these skills, I want to emphasize that I am well-versed in SOLID principles. My objective is to deliver innovative and scalable solutions for projects.

Education

2018-2022: Necmettin Erbakan University, Computer Engineering, GPA: 3.13/4

Project Experience

2022-2023: **Patika FullStack Bootcamp**

- **Project Overview:** Led the development of a comprehensive e-commerce web application with functionality spanning user management, payment processing, order handling, messaging, and dealer transactions.
- **Frontend Development:** HTML5, CSS3 and TypeScript; utilized Angular for a responsive user interface.
- **Backend Development**: Utilized .NET (DotNET) for a robust backend functionality.
- **Architectures Implemented**: MVC, Designed the system using Onion Architecture for modularity and Restful architecture for seamless communication.
- **Design Patterns Applied:** Implemented key design patterns including Repository, Mediator, CQRS, and UOW (Unit Of Work) to enhance code maintainability and scalability. Additionally, employed Built-in Inversion of Control principles using an IoC container for effective dependency management.
- **Additional Technologies:** JavaScript, RabbitMQ Integrated a variety of technologies such as SignalR for real-time communication, EF Core for efficient data access, JWT (JSON Web Token) for secure authentication, FluentValidation for input validation, Transaction management for data integrity, Middleware for request handling, Postman for API testing, Swagger for API documentation, PostgreSQL as the database, JSON for data exchange. I have a foundational level of knowledge in technologies such as Docker, Kubernetes and Azure.

2022-2023: **İspark Otopark Web Project**

- **Project Overview:** Developed a web application providing real-time information on parking occupancy, pricing, and locations for Ispark parking lots in Istanbul.
- **Backend Development:** Collaborated with a team member to design and integrate RESTful API services using ASP.NET CORE WEB API.
- **Frontend Design & Integration:** Created a dynamic and interactive user interface using Angular, ensuring seamless integration with HttpClient and RxJS library.
- **User Interface Features**: Implemented search and pagination functionality to enable users to efficiently find parking spaces.
- **Navigation & Routing:** Established the application's in-app navigation structure using RouterModule, managing user access to specific parking details and homepage navigation.
- **Documentation**: Prepared API documentation for the project using Swagger.
- **Data Integration**: Integrated Istanbul Metropolitan Municipality's free Ispark API into our project using Hangfire, allowing us to update our own API by fetching data from IBB in the background.

- **Team Collaboration & Version Control:** Coordinated project management efficiently with a professional team member using the Git version control system.

2020-2021: **Product Sales and Inventory Management Automation**

- **General Description:** This automation system encompasses inventory tracking, sales transactions, and inventory reporting functions.
- **User Interface Development:** Developed a user-friendly interface using .NET Windows Forms.
- **Database Integration:** Optimized data storage and querying capabilities by integrating Microsoft SQL Server.

2019-2022: **Teknofest Competitions**

- **General Description:** Throughout my university life, I participated in Teknofest competitions, developing projects in various engineering disciplines.
- **Türksat Model Satellite Mission:** Developed the Ground Station software for my role in the Türksat model satellite competition using .NET Windows Forms technology.

Language Proficiency

- English (B2)
- Turkish (Native)

Certification

- 2023: Patika.dev Vakıfbank FullStack Bootcamp
- 2023: C# (Basic) , SQL (Intermediate) , Problem Solving (Basic) HackerRank certificates
- 2020: Teknofest Turksat Competition Certificate
